compression wear

# Upper Body Wear

Version 08.03.1.

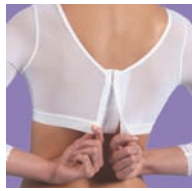

## **Design Veronique® Upper Body Wear**

This collection of garments is focused exclusively on the female upper body and arms, combining optimum compression in key surgical areas with elegant styling and comfort. Every garment is made from our breathable, lightweight powernet fabric and/or our soft cotton knit. For added comfort, there are no seams at key surgical sites and every seam is flat and non-chafing.

Each Design Veronique® design incorporates Gradient Compression Technology; this technology allows every garment to deliver the ideal amount of compression to the key surgical area. The vests are fully adjustable with hook & eye closures in the front of the garment and fully adjustable hook & eye closures in the back. A gripper lace is used at the end of all arm sleeves to prevent the sleeve from rolling-up.

Every garment is completely Latex and formaldehyde free, available in a size range of XS-4X and color options of Black, White and Champagne. We manufacture each and every garment in our California headquarters, ensuring the highest possible quality.
